

This is not a Hammer

But of course you know that. Always use the right tool for the job. Take abdominal cramps, an intense pain, often brought on by stress or aggravated after eating. Because these cramps are the result of spasms in the gut, painkillers or a hot water bottle won't address the underlying problem. Those things may be fine for period pains or tummy ache, but not cramps. Buscopan Cramps is specifically designed to relieve the intense pain of cramps by alleviating the cause, not masking the symptoms. Job done.

***Specifically designed to treat
the cause of abdominal cramps***
